

Remis' Formula

Formula:

$$RT=(14*(7-X))+(16-Y)+Z/30$$

Variables:

RT – rating

X – team division (A=1; B=2; C=3; ...; G=7)

Y – team position in division

Z – SP manager ranking points

Code of Conduct

I

-15th position in the higher division is equal to the 1st position in lower division;

-16th position in the higher division is equal to the 2nd position in lower division;

Explanation: 1st and 2nd positions would be promoted, 15th and 16th would be relegated

II

Significant step in SP manager ranking is **30** points. If the team in 14th position in higher division has 30 points less than the team in the 1st position in the lower division, means their ranking is equal.

Explanation: 30 points – 30 League matches during the season.

III

If teams have equal number of RT then higher team in the tanking list is:

1. Higher position in the division
2. Manager's SP playtime is longer (The club was registered earlier)

The main, most important and significant advantage of this formula is:

- SP manager ranking position is not included. (!!)
- Manager ranking points are used instead. (!!)
